

There are a million reasons MaxxLife is better than the competition.

We just want to talk about 1,031 of them.

The MaxxLife Ductile Disc Butterfly Valve supplies
1,031 - 1,088 more SCFM* flow than our nearest competitors.

*Standard Cubic Feet per Minute. Values verified by independent testing lab.

**MaxxLife Butterfly
Valve with Ductile Disc**

**Industry Standard
Valve with Ductile Disc**

HIGHEST FLOW VALVE ON THE MARKET TODAY

Super thin disc design with smaller hubs in flow path means the highest flow ductile disc butterfly valve in the transportation industry. Previously the only way to get this kind of flow was with an expensive one piece stainless steel disc. The engineers at BTI have designed a revolutionary new butterfly valve made exclusively for the transportation industry. This new design not only lasts longer, it allows for the same flow characteristics as a one piece disc and stem for a lot less cost. Plus, you get the added benefit of no external disc hardware risking contamination of your load.

For more information on this and other features, like the extendable neck, wear resistant resilient seat, ease of use and the seize-free construction, log on to BulkTankInc.com/MaxxLife
